Wildlife Ecology

Week 12 Assignment Solutions (2026)

1 In cave formations, the deposits growing downward from the roof are called?

(a) Stalagmites

(b) Columns

(c) **Stalactites**

(d) Sediment bars

2 Which of these is a deterministic factor?

a. environmental variation

b. forest fire

c. **death rate**

d. diseases

3 An ecological interaction in which both participating organisms are harmed is called

(a) mutualism

(b) commensalism

(c) **competition**

(d) neutralism

4 Ecology is the scientific study of that determine the distribution and abundance of organisms. (Fill in the blanks)

a. statics

b. **interactions**

c. dynamics

d. habitat

5 Mesodebris in the context of plastic debris has fragments of size

a. > 20 mm

b. **5 - 20 mm**

c. < 5 mm

d. < 1 mm

6 Which level is formed when similar cells and their extracellular matrix from the same origin together perform a specific function?

(a) Organ

(b) **Tissue**

(c) Organ system

(d) Population

7 Secondary succession refers to succession that occurs

(a) On newly exposed rock or sand surfaces

(b) In a saline body such as a marsh

(c) **After severe disturbance or removal of a pre-existing community**

(d) Only when climate controls the final community

8 A group of organs working together to perform one or more functions is called?

(a) Tissue

(b) Organ

(c) Organism

(d) **Organ system**

9 After a forest fire, an incompletely destroyed forest develops through herbaceous, shrub and woodland stages toward a stable stage. This is best described as?

(a) **Secondary succession**

(b) Climatic climax

(c) Bioaccumulation

(d) Species-area effect

10 If organisms already present in an area change the soil conditions and thereby drive further community change, the succession is?

(a) Allogenic succession

(b) **Autogenic succession**

(c) Catastrophic succession

(d) Seasonal succession
