Wildlife Ecology

Week 3 Assignment Solutions (2026)

1 I observe a bird take a tick out of another bird's head and eat it. In the social context, this behaviour would be called

a. tick hunting

b. auto grooming

c. **allo grooming**

d. foraging

2 Leech is an example of

(a) endoparasite

(b) herbivore predator

(c) parasitoid

(d) **ectoparasite**

3 An ecological interaction in which both participating organisms are harmed is called

(a) mutualism

(b) commensalism

(c) **competition**

(d) neutralism

4 Interspecific interaction occurs between

(a) **members of different species**

(b) members of the same species

(c) two organisms that are both benefited

(d) two organisms that remain unaffected

5 The distance maintained by nesting penguins to avoid pecking from neighbours is related to

(a) herbivory

(b) parasitoid pressure

(c) prey switching

(d) **territorial spacing**

6 A parasite that lives inside the body of its host is called

(a) ectoparasite

(b) **endoparasite**

(c) predator

(d) commensal

7 Birds on giraffe are an example of

a. colony

b. commensalism

c. **protocooperation**

d. allelopathy

8 Competition in which organisms directly consume a limited resource so that less remains for others is called

(a) interference competition

(b) **exploitative competition**

(c) apparent competition

(d) neutral competition

9 Interference competition is also known as

(a) apparent competition

(b) **contest competition**

(c) niche competition

(d) exploitative competition

10 The scientific study of animal behaviour is called

a. behaviourism

b. ecology

c. **ethology**

d. prey-predator dynamics
