Wildlife Ecology

Week 5 Assignment Solutions (2026)

1 In population dynamics, which pair represents additions to an existing population?

(a) Mortality and emigration

(b) **Natality and immigration**

(c) Mortality and natality

(d) Immigration and emigration

2 Cover board surveys are typically used for sampling

a. **herpetofauna**

b. fishes

c. large mammals

d. carnivores

3 Pan traps are used for sampling

a. bees

b. butterflies

c. non-pollinator insects

d. **pollinator insects**

4 A sampling procedure such that each possible combination of sampling units out of the population has the same chance of being selected is referred to as

a. **Simple random sampling**

b. Systematic sampling

c. Stratified sampling

d. Multistage sampling

5 The minimum replacement level fertility for a population to grow should be greater than

a. 1

b. **2**

c. 3

d. 4

6 A list of sampling units is called a:

(a) Sample

(b) Sampling intensity

(c) **Sampling frame**

(d) Stratum

7 In capture-recapture method, the first stage involves:

(a) Counting faecal pellets

(b) Removing trapped animals permanently

(c) Estimating bait consumption

(d) **Capturing, marking and releasing animals**

8 The logistic growth equation, when plotted, appears

a. I shaped

b. J shaped

c. **S shaped**

d. O shaped

9 employs a simple rule of selecting every kth unit starting with a number chosen at random from 1 to k as the random start.

a. Simple random sampling

b. **Systematic sampling**

c. Stratified sampling

d. Multistage sampling

10 Which of these is not a measure of absolute population density?

a. total count

b. **pelt count**

c. capture-recapture method

d. removal method
