1 A guild is a group of species that

(a) Occupy only one climax community

(b) Have identical population size

(c) **Utilise resources in a similar way**

(d) Are confined to saline habitats

2 The climax near Tindni village is being controlled by disturbance by cattle. This is an example of

a. climatic climax

b. edaphic climax

c. **disclimax**

d. catastrophic climax

3 Species abundance may be expressed in terms of

(a) Climate, soil and slope

(b) **Number of individuals, biomass or cover**

(c) Hydrosere, xerosere and halosere

(d) Resistance, resilience and stability

4 Resistance refers to the ability of a community to

(a) Recover quickly after disturbance

(b) **Persist without change in the face of disturbance**

(c) Increase the number of pioneer species

(d) Replace one seral stage with another

5 Importance value can be written as

a. Relative density + Relative frequency X Relative dominance

b. Relative density X Relative frequency + Relative dominance

c. **Relative density + Relative frequency + Relative dominance**

d. Relative density X Relative frequency X Relative dominance

6 Secondary succession refers to succession that occurs

(a) On newly exposed rock or sand surfaces

(b) In a saline body such as a marsh

(c) **After severe disturbance or removal of a pre-existing community**

(d) Only when climate controls the final community

7 Lithosere is an example of

a. hydrosere

b. **xerosere**

c. psammosere

d. halosere

8 A transition area where two communities meet and integrate is called

(a) Habitat

(b) Niche

(c) **Ecotone**

(d) Sere

9 Which of these is correct?

a. Fundamental niche > Realised niche

b. Fundamental niche = Realised niche

c. Fundamental niche < Realised niche

d. **a or b**

10 Species richness refers to

(a) **Number of species**

(b) Number of individuals of one species

(c) Biomass of the dominant species

(d) Basal area of all trees
