Wildlife Ecology

Week 8 Assignment Solutions (2026)

1 Which of these correctly represents the process of habitat fragmentation and loss?

a. **Original forest → Dissection → Perforation → Fragmentation → Attrition**

b. Original forest → Dissection → Attrition → Fragmentation → Perforation

c. Original forest → Dissection → Perforation → Attrition → Fragmentation

d. Original forest → Dissection → Fragmentation → Perforation → Attrition

2 Habitat degradation means

(a) complete removal of all organisms from an area

(b) legal declaration of a protected area

(c) breaking a forest into administrative zones

(d) **reduction in habitat quality for a given species**

3 When area is reduced by 90% and z is taken as 0.30, species richness approximately becomes

(a) one-tenth of the original

(b) **half of the original**

(c) double the original

(d) unchanged

4 Breaking a natural landscape into small isolated parcels within human-dominated land is called

(a) habitat restoration

(b) **habitat fragmentation**

(c) ex-situ preservation

(d) seed dormancy

5 We prefer those areas for the creation of a conservation reserve where the level of threat is

a. very high

b. **medium**

c. very low

d. non-existent

6 A very small population moves towards extinction mainly because of Allee effect, chance deaths, and related small-population problems. This is best described as

(a) habitat displacement

(b) **small population paradigm**

(c) reserve design

(d) biodiversity repository

7 A population becomes smaller because its habitat is shrinking, competitors are increasing, and poaching is removing individuals. This situation is best studied under

(a) **declining population paradigm**

(b) small population paradigm

(c) island biogeography model

(d) cryopreservation strategy

8 Which of these is a deterministic factor?

a. environmental variation

b. forest fire

c. **death rate**

d. diseases

9 Roads, railways, dams, and similar structures contribute to fragmentation because they may act as

(a) **mortality sources and physical barriers**

(b) seed collection centres

(c) botanical repositories

(d) cryopreservation facilities

10 The acronym HIPPO does not include

a. habitat loss

b. invasive species

c. **pollination**

d. pollution
